

CLAIMS

1 1. A method for modifying a web page to point to local content instead of
2 remote content, said method comprising:

3 receiving a web page to be modified;

4 scanning the web page to locate an image in the web page;

5 determining whether the image is supported by an image database
6 that stores images associated with portable computer readable storage
7 products distributed to users; and

8 modifying the web page to direct retrieval of content for the image to
9 be retrieved locally from the portable computer readable storage products
10 instead of from the remote content.

1 2. A method as recited in claim 1, wherein the image has an image tag
2 that provides a remote address for the remote content for the image, and

3 wherein said modifying operates to modify the image tag to point to the
4 portable computer readable storage products instead of the remote content.

1 3. A method as recited in claim 1, wherein said method further comprises:

2 adding the image to the image database when said determining
3 determines that the image is not yet supported by the image database.

1 4. A method for modifying a web page to point to local content on a
2 portable computer readable storage product instead of remote content, said
3 method comprising:

4 receiving a web page to be modified, the web page including at least
5 one image, the source for the content for the image being linked to a remote
6 location; and

modifying the web page to direct retrieval of content for the image to be retrieved locally from the portable computer readable storage product instead of from the remote content.

5. A method for creating portable computer readable storage products to be distributed to users, said method comprising:

receiving web pages to be modified;

scanning the web pages to locate high-bandwidth content on the web pages;

determining whether the high-bandwidth content is supported by a database that stores high-bandwidth content associated with portable computer readable storage products to be created;

adding the high-bandwidth content to the database when said determining determines that the high-bandwidth content is not yet supported by the database; and

creating portable computer readable storage products for distribution to users by storage of the high-bandwidth content from the database to the portable computer readable storage products.

6. A method as recited in claim 5, wherein the high-bandwidth content is images.

7. A method as recited in claim 5, wherein said method further comprises:

distributing the portable computer readable storage products that have been created to users.

8. A method as recited in claim 5, wherein said method further comprises:

modifying the web pages to direct retrieval of content for the high-bandwidth content locally from the portable computer readable storage products.

1 9. A computer readable medium including at least computer program
2 code for automatically modifying a web page to point to local content on a
3 portable computer readable storage product instead of remote content, said
4 computer readable medium comprising:

5 computer program code for receiving a web page to be modified, the
6 web page including at least one high-bandwidth content component, the
7 source for the content for the high-bandwidth content component being linked
8 to a remote location; and

9 computer program code for modifying the web page to direct retrieval
10 of content for the high-bandwidth content component to be retrieved locally
11 from the portable computer readable storage product instead of from the
12 remote content.

1 10. A computer readable medium as recited in claim 9, wherein the remote
2 location is a remote server that is accessed through a network.

1 11. A computer readable medium as recited in claim 10, wherein the
2 network includes the Internet.

1 12. A computer readable medium as recited in claim 10, wherein the least
2 one high-bandwidth content component has a source location provided within
3 the web page, and

4 wherein said modifying operates to alter the source location for the
5 least one high-bandwidth content component to point to data previously
6 stored to the portable computer readable storage product.

1 13. A computer readable medium as recited in claim 12, wherein the least
2 one high-bandwidth content component is an image.

1 14. A computer readable medium as recited in claim 13, wherein the
2 remote location is a remote server that is accessed through a network.

1 15. A computer readable medium as recited in claim 14, wherein the
2 network includes the Internet.
